

SIMATS ENGINEERING (SAVEETHA SCHOOL OF ENGINEERING)

Department of Computer Science and Engineering

ASSESSMENT TOOL 2 – EXPERIMENTATION

Course Code:	ITA03	Course Title:	Mobile computing
CO Assessed:	CO2	Assessment:	Assessment Tool 2 – EXPERIMENTATION
Weightage:	30 % of CIA	Total Marks:	20 marks
CO2 Statement:	Compare mobile communication technologies, including multiple access techniques and network evolution, based on performance and applications.		
Student Name:	I.V.Gowtham Kumar Reddy	Reg. No.:	192372158
Section / Batch:	B.Tech [IT] / 2024	Date:	04/08/2026

Code of Conduct

I I.V.Gowtham Kumar Reddy(192372158) (Name / Reg. No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the Student: gowtham reddy

Instructions

- This test contains ONE question.
- Duration: 30 minutes.

Faculty In-charge	Course Coordinator	Head of Department

Date: _____	Date: _____	Date: _____

Annexure A - QUESTIONS

1. Figma-Based Mobile IP Communication Workflow Analysis (BL4 – Analyze)

Design an interactive Figma prototype illustrating the complete workflow of Mobile IP communication when a Mobile Node moves from its Home Network to a Foreign Network. Your design should include the Home Agent (HA), Foreign Agent (FA), Correspondent Node (CN), Care-of Address (CoA), Registration Process, and Packet Tunneling.

Analyze the communication process by identifying:

- The purpose of each network component.
- Points where packet delay or packet loss may occur.
- The effect of node mobility on communication performance.
- Possible improvements to reduce latency.

Deliverables:

- Figma (.fig) design
- GitHub repository containing exported images/PDF and documentation (README).

<https://www.figma.com/make/ud4jfKeoFqDTH5nlboAQbg/Mobile-IP-Communication-Workflow?code-node-id=0-9&p=f&t=fs1BblBU0ratVpun-0&fullscreen=1>

2. Comparative Network Architecture Design Using Figma (BL4 – Analyze)

Using Figma or draw.io, create a comparative architectural diagram showing both a Cellular Wireless Network and a Mobile Ad Hoc Network (MANET) operating in the same smart city environment.

Analyze the architectures by comparing:

- Infrastructure dependency.
- Routing mechanisms.
- Scalability.
- Fault tolerance.
- Mobility support.
- Suitable application scenarios.

Highlight the advantages and limitations of each architecture through annotations in your design.

Deliverables:

- Editable design file.
- GitHub repository with screenshots, comparison report, and design assets.

<https://www.figma.com/make/CCYGtCadArKZFKe7vRSe1g/Comparative-Network-Architecture-Diagram?fullscreen=1&t=eOmH7LgGiugKgbQY-1&code-node-id=0-9>

3. Routing Protocol Visualization and Analysis (BL4 – Analyze)

Develop an interactive visualization using Figma, Mermaid.js, D3.js, or any visualization framework illustrating the operation of one Proactive Routing Protocol and one Reactive Routing Protocol in a mobile wireless network.

Analyze:

- Route discovery process.
- Route maintenance mechanism.
- Routing overhead.
- Delay in establishing communication.

- Performance under high node mobility.

Include a comparative summary explaining which protocol performs better under different mobility conditions.

Deliverables:

- Source code/design files.
- GitHub repository with implementation, screenshots, and analysis report.

<https://www.figma.com/make/4H40aXtmTfMF4KYB6ieTq/Routing-Protocol-Visualization?code-node-id=0-9&p=f&t=xerUJm9Bh9xGPNbf-0&fullscreen=1>

4. Mobile IP Application Design for Smart Healthcare (BL4 – Analyze)

Design a Smart Healthcare Mobile IP system using Figma that enables doctors, ambulances, hospitals, and patients to remain connected while moving across different wireless networks.

Analyze:

- How Mobile IP maintains uninterrupted communication.
- Challenges during handoff between networks.
- Security vulnerabilities during mobility.
- Possible design improvements to increase reliability.

Provide navigation between screens demonstrating different mobility scenarios.

Deliverables:

- Interactive prototype.
- GitHub repository containing design files, exported prototype, and documentation.

<https://www.figma.com/make/0x4q4yX7OwKA6C1u4sqRFS/Smart-Healthcare-Mobile-IP-Design?code-node-id=0-9&p=f&t=ck6w1haCVqgFahWi-0&fullscreen=1>

5. Wireless Network Decision Dashboard Using GitHub Project (BL4 – Analyze)

Create a web-based dashboard (using HTML/CSS/JavaScript, React, or another programming framework) or an interactive Figma dashboard that helps network engineers determine whether a given

scenario should use Mobile IP, Cellular Networks, or Ad Hoc Networks.

The dashboard should analyze multiple parameters such as:

- Node mobility.
- Infrastructure availability.
- Network size.
- Routing complexity.
- Energy consumption.
- Reliability requirements.

The system should justify its recommendation based on the analyzed parameters.

Deliverables:

- Source code or Figma project.
- GitHub repository with complete code/design, README, screenshots, and analysis report.

<https://www.figma.com/make/yJz9Tr5Bfg1SfBSgKqRbw9/Network-Decision-Dashboard?code-node-id=0-6&p=f&t=N2ruM4Othz0oeyIM-0&fullscreen=1>

Criterion	Marks
Design Quality (Figma/Programming Tool)	20
Technical Analysis (BL4)	30
Correctness of Mobile Networking Concepts	20
GitHub Repository Organization & Documentation	15
Creativity and Visualization	15
Total	100 Marks
